DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 50-59 are rejected under 35 U.S.C. 103(a) as being unpatentable over EP 0 776 691, and further in view of Calvert et al (US 3,779,712).

EP '691 discloses a catalyst feeder for use in combination with a reactor vessel comprising a catalyst vessel connected to a catalyst injection tube for delivering polymerization catalyst to the reaction zone, a carrier solution tube (14), wherein both the catalyst and carrier solution meets before entering the reactor (10). A catalyst feeder further comprising a gas line (4) to the feeder (figures and col. 10, lines 26-48).

EP '691 discloses the claimed invention above, but fails to teach a catalyst injection tube placed within a support tube and protrudes through the reactor wall.

However, Calvert et al disclose a catalyst tube (14) within a support tube (38,42,43), wherein the catalyst tube protrudes through the wall of reactor (15) for the purpose of during removal of the catalyst tube, the reactant will remain within the support tube and the reactor (col. 5, lines 49-65).

Therefore, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to provide a support tube as taught by Calvert et al, in EP '691 in order to prevent any loss of the reactant.

Response to Arguments

3. Applicant's arguments filed on June 02, 2004 have been fully considered but they are not persuasive.

Applicant argues that Calvert et al fail to disclose "catalyst injection tube being disposed within a support tube that protrudes through the reactor vessel wall". Examiner respectfully disagrees. Based on the broadest interpretation of the claimed language, examiner understood that the injection tube protrudes through the vessel wall. Therefore, Calvert et al teaches in figure 5, that the injection tube protrudes the wall (15).

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1725

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
